

Creya Learning & Research Pvt Ltd

Innovation is the way to solve the challenges facing us as a nation and build on the opportunities. India is at the cusp of that big leap and a vibrant student community fired by a sense of scientific enquiry and problem solving skills will help us get there.

Creya Learning & Research is an educational organization set-up in **2011** with a mission to lay the foundation for an inquiry-based, application oriented learning preparing our students for success in the 21st Century. Creya is a pioneer of the design studio based learning programs in India helping children across all ages to help develop their creative thinking and problem solving skills.

Based out of Hyderabad, Creya has been founded by a team with extensive experience of working with students and education systems of different countries across the globe including the United States and India. The Creya team also shares a deep passion to making learning more meaningful and joyful thus providing the motivation for children to dream up ideas and the tools to translate their ideas to working solutions.

Creya programs are designed to build a strong sense of curiosity in children and empathy for real world problem solving, a key ingredient to motivate children to innovate. **XEL** from Creya is a hands-on project based learning program for schools and provides opportunities for children to apply science in an engaging way. Apart from Creya XEL, Creya also provides custom curriculum services to some of progressive schools across India.

Improving learning outcomes for **50000+ students** across **100+ schools** from CBSE, ICSE, IGCSE and IB educational boards in India, we are laying the foundation for a nation of innovation. Among the many awards and recognition to our pioneering efforts, Education World magazine's listing of Creya as one of the top 3 Big Bang Innovations in K12 education space and the **Innovation for STEM Education** by South Asian Summit on Education are worth a mention.

Creya is a complete solution with the learning environment, project curriculum and the required training and support that owns up responsibility for the delivery of learning outcomes.
