

About Praveen Vudoagiri

Co-Founder and Coach

A Mechanical Engineer by training, Creya Co-Founder Praveen Vudoagiri graduated from S.V. University in Andhra Pradesh. He spent most of his career before Creya defining and delivering software applications.

His last role before co-founding Creya was that of Product and Program Leader at **Knowledge Universe Education Digital** (KUED)'s Global Scholar division, where he managed the creation of end-to-end Learning Management Systems. He was responsible for evolving the Chennai office into the product-engineering hub for Global Scholar's suite of Learning Management Solutions, and for setting up systems and processes for scalable delivery with global teams. Before KUED, Praveen was the delivery owner for **Versata's** (formerly Trilogy) Business Rules Management products and was responsible for delivering on the product roadmap and implementation engagements with Fortune 500 companies such as Ford, Avaya, Boeing, Sun Microsystems and Herman Miller.

Praveen has proven expertise in building and mentoring high powered teams and has been the Director of the prestigious **Trilogy University 2007** (an award winning initiative to develop Trilogy's next generation leadership).

Praveen opines that in today's education system where success is defined by performance in standardized tests, children have forgotten the joy of learning. Education is seen as ticket to land in a cushy job but is not perceived as a means to empower children to fulfill their potential.

At Creya, Praveen is most excited about helping the learners of today rediscover the joy of learning, collaborating, reflecting and designing: basics precepts to help them unravel all the challenges of life and excel as leaders, innovators and change makers. He firmly believes that empowering our future generation to excel in life and to live their dreams is the key India becoming a superpower.
